1

1	^
1	1. A method of optically scanning a target item, comprising:
2	predefining settings for scanning parameters appropriate to a photographic image;
3	optically scanning the target item using the predefined settings to form a digital
4	image of the target item; and
5	automatically converting the digital image into a data file.
1	2. The method of claim 1, further including:
2	automatically storing the data file.
1	3. The method of claim 2, wherein the storing includes storing the data file on a file

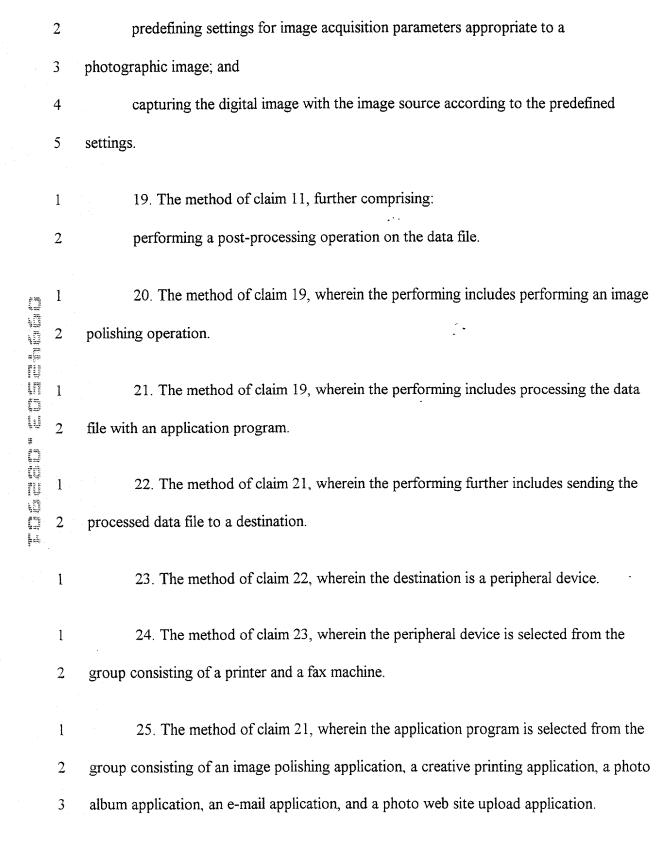

- 4. The method of claim 3, further including specifying a date, and wherein the 1
- storing further includes storing the data file on the file system in a folder associated with 2
- 3 the date.

system.

- 5. The method of claim 4, wherein the folder is associated with a particular month 1 2 and year.
- 6. The method of claim 1, wherein the scanning parameters are selected from the
- group consisting of pixel depth, resolution, crop mode, and skew correction mode. 2

1 7. The method of claim 6, wherein the scanning parameter settings appropriate to a 2 photographic image includes: . See . 3 pixel depth = 24-bit color; 4 resolution = 150 dots per inch; crop mode = automatic border detection; and 5 6 skew correction mode = automatic image straightening. 8. The method of claim 4, wherein the file system has no folder associated with the 1 2 date, further including: 3 creating the folder associated with the date. 1 9. The method of claim 4, wherein the data file is a plurality of data files and wherein the file system has a plurality of folders, further including: 2 viewing a representation of the plurality of folders; and 3. viewing a representation of the data files in one of the folders. 4 1 10. The method of claim 1, further including providing an image capture signal to 2 initiate the scanning, and wherein the scanning and converting is performed without any further user intervention. 3 11. A method of automatically organizing digital images, comprising: 1 2 acquiring a digital image from an image source; automatically associating a date with the digital image; 3

- automatically converting the digital image into a data file; and 4 storing the data file into a folder of a file system, the folder associated with the 5 6 date. 1 12. The method of claim 11, further including: 2 creating the folder if no other folder is associated with the date. 1 13. The method of claim 11, wherein the date is the capture date when the image 2 was captured by the image source. 14. The method of claim 11, wherein the date is the storage date when the image 1 2 was converted into a data file. 1 15. The method of claim 11, wherein the data folder is associated with a particular 2 month and year. 16. The method of claim 11, wherein the data folder is selected from a set of data 1 2 folders. 17. The method of claim 11, wherein the digital image is a previously captured 1 image, and wherein the acquiring further includes: 2 3 uploading the previously captured image.
 - 18. The method of claim 11, wherein the acquiring further includes:

	1	26. A method of processing digital images from a plurality of image sources,
2	2	comprising:
	3	predefining at least one set of image acquisition parameters, each set associated
4	4	with a corresponding one of a group of image sources and appropriate for acquiring a
	5	photographic image with the corresponding image source;
. (6	configuring a selected one of the image sources with the associated set of image
,	7	acquisition parameters;
The state of	8	acquiring a digital image from the selected one of the image sources;
	9	automatically converting the digital image into a data file; and
# 1	0	integrating the data file into a file structure common to data files from all the image
1	1	sources.
#* 4# 4# 4# 4#	1	27. An image processing system, comprising:
	2	at least one image source, each image source for providing at least one digital
	3	image upon request;
	4	an image capture subsystem coupled to the at least one image source for
	5	requesting and receiving the at least one digital image from the at least one image source,
	6	the image capture subsystem further for associating a date with each digital image and
	7	automatically converting each digital image into a corresponding image file; and

2

acquisition date provided by the image source.

a file system coupled to the image capture subsystem for automatically storing

each image file in a selected one of a plurality of data folders, the selected data folder 9 10 associated with the date. 1 28. The image processing system of claim 27, comprising: an image management subsystem coupled to the image capture subsystem and the 2 file system for viewing the plurality of data folders and the image files in a specified data 3 4 folder. The first start that and thou with the rate 29. The image processing system of claim 28, comprising: a post-processing subsystem coupled to the image management subsystem for 2 post-processing at least one selected one of the image files. 3 He that that then well that the 30. The image processing system of claim 29, wherein the post-processing 1 subsystem is further coupled to the file system for accessing the selected ones of the image 2 3 files. 31. The image processing system of claim 29, comprising: 1 an image destination coupled to the post-processing subsystem for receiving 2 3 output data corresponding to at least one selected one of the image files. 32. The image processing system of claim 27, wherein the date is an image 1

date.

- 33. The image processing system of claim 27, wherein the date is a current date provided by a date subsystem coupled to the image capture subsystem.
- 34. The image processing system of claim 27, wherein the at least one image source is an optical scanner, and wherein the image capture subsystem provides predefined settings appropriate to a photographic image to the optical scanner for use in providing the at least one digital image.
 - 35. A processor-readable medium having processor-executable instructions thereon which, when executed by a processor, cause the processor to:

 acquire a digital image from an image source;

 automatically convert the digital image into a data file having a date associated with the digital image; and

 store the data file into a data folder of a file system, the folder associated with the
- 36. A processor-readable medium having processor-executable instructions
 thereon which, when executed by a processor, cause the processor to:

 predefine settings for scanning parameters appropriate to a photographic image;

 optically scan the target item using the predefined settings to form a digital image

 of the target item; and

automatically convert the digital image into a data file.

1	37. An image processing system, comprising:
2	means for acquiring a digital image from an image source;
3	means for automatically converting the digital image into a data file having a date
4	associated with the digital image; and
5	means for storing the data file into a data folder of a file system, the folder
6	associated with the date.
1	38. An image processing system, comprising:
2	means for predefining settings for scanning parameters appropriate to a
3	photographic image;
4	means for optically scanning the target item using the predefined settings to form a
5	digital image of the target item; and
6	means for automatically converting the digital image into a data file.
1	39. A method for optically scanning a target item, comprising:
2	a step for predefining settings for scanning parameters appropriate to a
3	photographic image;
4	a step for optically scanning the target item using the predefined settings to form a
5	digital image of the target item; and
6	a step for automatically converting the digital image into a data file.
1	40. A method for automatically organizing digital images, comprising:
2	a step for acquiring a digital image from an image source;

3.	a step for automatically converting the digital image into a data file having a date
4	associated with the digital image; and

- a step for storing the data file into a data folder of a file system, the folder associated with the date.
 - 41. An image processing system, comprising:
- at least one image source, each image source for providing at least one digital

 image upon request;
 - an image capture subsystem coupled to the at least one image source which requests and receives the at least one digital image from the at least one image source, associates a date with each image, and automatically converts each image into a corresponding image file; and
 - a file system coupled to the image capture subsystem which receives each image file from the image capture subsystem and automatically stores each image file in a selected one of a plurality of data folders, the selected data folder associated with the date.
